### **Flexco Introduces Health Design Wall Base with Preformed Inside and Outside Corners**

TUSCUMBIA, Alabama – As Flexco®, a leading manufacturer in rubber, vinyl and ESD control commercial flooring, continues to strive and be the best manufacturer of design-oriented flooring products, we would like to introduce to market the Health Design Wall Base as an added value to our flooring line.

Health Design Wall Base will play a major role in healthcare facilities and may be a deciding factor on several jobs when push comes to shove. Health Design Wall Base is a rubber (TPR) base that will be offered in 6" height and 1/8" gauge tapering to .080" with preformed inside and outside corners. The base has score marks on the back so that it can be cut back and welded to three different heights of material – 1/8", .100" and .080". Health Design Base can be heat welded to any commercial sheet rubber or vinyl product using FLEXCO rubber or vinyl weld beads.

Flexco® will now offer Health Design Wall Base and corners in a total of 15 colors. There are treads, risers, stringers, accessories and standard wall base colors that match or contrast well with the 15 colors available in Health Design Wall Base for your other project needs.

Building owners and end users will love the clean lines of installation versus the messy welds you might see from an installer that has problems trying to cove material to make corner on site. With the addition of the Health Design Wall Base and preformed corners to the exciting list of products that Flexco has to offer to the flooring industry – it is clear that Flexco is dedicated to being the very best flooring manufacturer in the industry.

FLEXCO®, based in Tuscumbia, Ala., has produced quality resilient flooring for more than 60 years. With distributors servicing all 50 states, as well as Canada, South America, Europe and Asia, FLEXCO's goal is to serve as the leading provider of rubber, vinyl and ESD control commercial flooring.
